Application No.: 10/807,195 Docket No.: SON-2982

AMENDMENTS TO THE CLAIMS

- 1. (Canceled)
- 2. (Original) A wiring board comprising:

interlayer insulating films;

multilayer wiring films, each being provided at one of the interlayer insulating films or between two of the interlayer insulating films;

interlayer-connection conductor films, each extending through at least one of the interlayer insulating films and providing an electrical connection between at least two of the interlayer insulating films;

at least one bare semiconductor integrated circuit device;

a first shield wiring film on which the semiconductor integrated circuit device is directly mounted;

a second shield wiring film provided so as to oppose the first wiring film with the semiconductor integrated circuit device interposed therebetween; and

a plurality of shield interlayer-connection conductor films that are provided so as to surround a periphery of the semiconductor integrated circuit device and that provide electrical connections between the first shield wiring film and the second shield wiring film, each shield interlayer-connection conductor film extending through at least one of the interlayer insulating films.

- 3. (Currently Amended) The wiring board according to one of claims 1 and claim 2, wherein the first and second shield wring wiring films have a gap therebetween, the gap being smaller than one half a wavelength λg of an electromagnetic wave to be prevented from radiating.
- 4. (Currently Amended) The wiring board according to one of claims $\frac{1 \text{ to } 22 \text{ and } 3}{1 \text{ to } 22 \text{ and } 3}$, wherein at least one of the shield wiring films has a hole, a diameter or a longitudinal side of the hole being smaller than one half a wavelength λg of an electromagnetic wave to be prevented from radiating.

Application No.: 10/807,195 Docket No.: SON-2982

5. (Currently Amended) The wiring board according to one of claims $\frac{1 + to 22}{2}$ and $\frac{3}{2}$, wherein the first and second shield wiring films and the shield interlayer-connection conductor films define a shield cage having $\frac{1}{2}$ and $\frac{1}{2}$ rectangular-parallelepiped inner space with height a, width b, and length c, where $\frac{1}{2}$ and a wavelength $\frac{1}{2}$ of an electromagnetic wave to be prevented from radiating satisfies a relationship:

$$\lambda g > 2/[{(1/b)^2 + (1/c)^2}^{1/2}].$$

- 6. (Currently Amended) A circuit module comprising: the wiring board according to one of claims 1-to 22 and 3; at least one semiconductor integrated circuit device provided on the wiring board; and at least one passive component provided on the wiring board.
- 7. (Canceled)
- 8. (Canceled)
- 9. (Currently Amended) The wiring board according to claim 4, wherein the first and second shield wiring films and the shield interlayer-connection conductor films define a shield cage having an-a_rectangular-parallelepiped inner space with height a, width b, and length c, where $a \le b \le c$, and a wavelength λg of an electromagnetic wave to be prevented from radiating satisfies a relationship:

$$\lambda g > 2/[{(1/b)^2 + (1/c)^2}^{1/2}].$$

10. (Canceled)

and

11. (Previously Presented) A circuit module comprising:
the wiring board according to claim 4;
at least one semiconductor integrated circuit device provided on the wiring board;

at least one passive component provided on the wiring board.

Application No.: 10/807,195 Docket No.: SON-2982

12. (Previously Presented) A circuit module comprising: the wiring board according to claim 5; at least one semiconductor integrated circuit device provided on the wiring board;

and

at least one passive component provided on the wiring board.
